

Dybuster is a spin-off from the Institute of Computer Science from ETH Zürich, developing therapy software for people with dyslexia. The young team showed the efficiency of the therapy software in an independent scientific user study. The company became better known as a finalist of the show „Start-up“ by SF DRS. Next year, our start-up should grow rapidly.

## **SW Developer 100% in Spin-off**

### **Your Challenges:**

There are several SW projects at hand. The main project is turning our current stand-alone software into a client software which can communicate with a server. The server and corresponding data base also need to be implemented. Side projects include computer graphics (OpenGL) and application development. In our driving team, every body works self-responsibly and takes on the sub-projects most suitable and most interesting for him or her.

### **Your Profile:**

You are experienced in C/C++, and preferably obtained a degree in Computer Science (B.Sc., M.Sc., Diploma). Expertise related to our main projects (client-server communication, data bases, security) would be nice to have, but no pre-requisite. You like to communicate, are open minded and look forward to the start-up environment with its many possibilities and challenges. You are not afraid of accepting responsibility, and either look for a temporary employment (~6 months) or an unlimited employment.

### **Your Contact:**

Christian Vögeli, CEO, is looking forward to your application, preferably to [business@dybuster.com](mailto:business@dybuster.com). You will work at Technopark in Zurich, with the possibility to work from home some days of the week.

Dybuster AG  
Technoparkstrasse 1
